

Figure 1: AUROC values and hierarchical clustering. The top panel shows a color scale for AUROC values from 0 to 1. The middle panel shows a dendrogram of AUROC values. The bottom panel shows a heatmap of AUROC values. The heatmap is a square matrix where each cell represents the AUROC value for a pair of samples. The color scale ranges from dark blue (low AUROC) to dark red (high AUROC). The dendrogram shows the hierarchical clustering of the samples based on their AUROC values. The heatmap shows the AUROC values for all pairs of samples, with the diagonal elements representing the AUROC values for self-comparisons (which are all 1.0).
